(54) **Facade panel for supporting brickwork**

(57) The panel (1) according to the invention for constructing building facades comprises a) a base (3) substantially shaped like a plate, shell, mesh or grill, b) a plurality of veneering anchorage elements (5), each of which forms a seat (7) arranged to accept and position a brick (M), a portion of brick or a tile. The plurality of veneering anchorage elements (5) is arranged on at least one larger face of the base (3) such that when a plurality of bricks (M) is inserted in the respective seats (7), a predetermined design or ornamental pattern is created. The seats (7) act as a guide in making the design or ornamental pattern, enabling the wall to be veneered much more quickly.

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 10 17 4508

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
